Linked Lists

This reads numbers from the standard input, and sorts them in increasing numerical order. It then prints the sorted numbers.

```
/*
 * LINKED LIST SORTER
 *
 * This program reads in numbers and sorts them in increasing numerical order
 * The data structure used is a linked list; each element looks like this:
 *    +--------------+
 *    |  data field  |  <--- holds the integer that you read in
 *    +--------------+
 *    |  next field  |  <--- holds pointer to next element in  list
 *    +--------------+       (NULL if nothing follows it)
 *
 * The pointer variable "head" contains a pointer to the first element in
 * the linked list (NULL if there are no elements in the linked list)
 */
#include <stdio.h>
