

Extra Credit 2

Update. In problem 1, “page 170” has been corrected to be “page 18”.

Due: April 25, 2018 at 11:59pm

Points: 20

Questions

1. (10 points) In KeyNote, write an assertion that would allow the second action environment in the example on ~~page 170~~ [page 18](#) to satisfy the policy. For your assertion, the evaluator is to return `_MAX_TRUST`.
2. (10 points) Consider Amy’s problem of finding out if Danny is a good programmer in the first example of Section 6.5.2. Amy does not know Carole, so she asks Boris for a recommendation about Carole’s recommendation. Boris wants to assign a (recommender) trust level of 3 to this. How would this change the computation of Amy’s trust value for the path used to find out about Danny?
